

TIME FOR WINTERIZATION!!!!

Just a friendly reminder to winterize your sprinkler system

*Please shut OFF the water valve to sprinkler system (basement) and turn off the controller (important to prevent solenoid damage). *Smart controllers will need to remain on for access and technician will turn off after winterization is completed.

Let us know the date you plan to have the water off and we can come and do the rest from the exterior.

Please send an email to matthewsirrigation@yahoo.com or call 614-888-8601 with your shut off date. (day you will turn OFF basement valve)

*In some cases, we will need access to the controller- therefore we will make attempts when in area or will need to schedule an appointment.

Please note that the day you turn off the water, may not be the day we winterize. Once we know the water is off, the next time we are in the area we will complete the winterization

*** We are happy to flag sprinkler heads for those who are planning on aerating post winterization, but an additional fee will apply***no repairs will be made alongside winterization due to time constraints**

**** Winterizations performed after 11/21 will incur a \$50 surcharge.
